Germany

Completion date: 2009

Products:
zenon, black dot,
ambition

Due to the trapezoidal shape facing the south, the work rooms of the company are flooded with daylight. The **zenon** desk system and **black dot** office swivel chairs were used for the furnishings.

In the built environment of the region, which tends to be characterised by stone and clinker buildings, Krogmann sent out a signal with a wooden construction. Inspired by the south-German and Austrian tradition of carpentry, Despang Architekten designed a company headquarters, the work-planning and execution of which were carried out by the client. The result was an outstanding office building that simultaneously demonstrates the capabilities of the client. The company can now keep pace with its colleagues from the south in terms of its self-image as well!

The ascending space not only promotes passive daylight illumination but also solar optimisation. The height of the room enables a gallery level, reached by means of a central staircase.

Towards the north, the building narrows in order to provide protection against the weather. Cupboards from the **ambition** series were used as furniture for storage.

Here in the entrance area, technical rooms and sanitary rooms are accommodated in wooden boxes. Photos: © Olaf Baumann
