R+V Versicherung AG has extended its central offices by adding a new building into which 1200 employees together with their workstations have now moved. Visitors come through the glazed, building-high entrance hall and take lifts made of glass in order to get to the different floors, where there are open gallery areas containing employee communication zones next to the hall.

The offices are organised in units of two and are in the form of standard 3-axis offices. There is a great deal of transparency due to the large amount of glass in the system walls of the building.

With 50 per cent of the energy supply coming from geothermic sources, the building has been furnished with 12,000 items of furniture from Sedus.

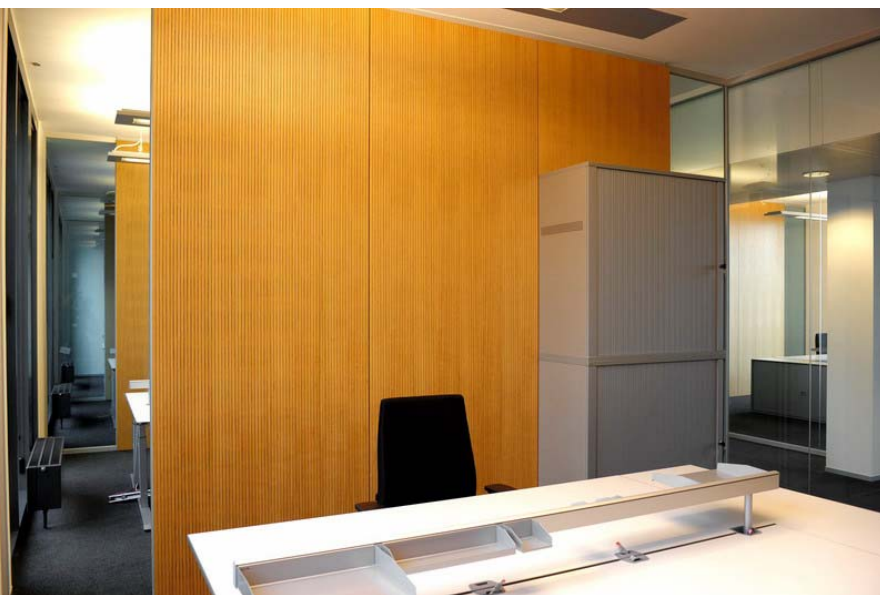

An especially interesting aspect of the project was the logistics underpinning delivery and installation: 60 articulated lorries delivered the individual components and a twelve-person installation team took 18 days to complete its work, after which the building was ready for the personnel to move in.

The workstations are equipped with desks from the **temptation C** range. Storage units are in the form of specially made cabinets from the **grand slam** series. The width of the cabinets is exactly matched to the size of the wall panels. **open up** und **black dot** are used as seating furniture. Each workstation is equipped with function elements on the desk, thus enabling maximum organisational options in a very small space. Photos: © A. Stehle, Mainz

Meeting spaces are either integrated in the offices – where necessary even with cut-to-size table tops for reasons of space – or are located in conference rooms specially envisaged for this purpose.
